

Idea development

Idea description: window panel from wood for keeping the warmth and light out of the room/space.

Parts and/or materials used: panel doors of doors.

New function of the idea: keep the most warmth and sunlight out of the room/space.

Draw idea:

Can this idea be realized locally? How? Easy in the Netherlands, but on multiple places not every place is nearby.

Where is this idea located on the value pyramid? Reuse, remanufacture

Are the things, needed to accomplish this, within your reach? You need to saw the panel doors so that there become mutple pieces out of it. After cutting you need to place the pieces back but in a angle of 30 degrees for keeping the sun out.
