

## Idea development

**Idea description:** BBQ, small enough to serve 2-4 persons

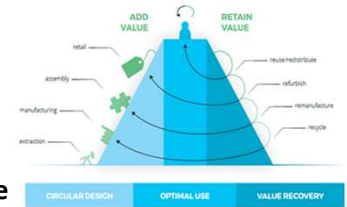

**Parts and/or materials used:** Expansion tank, copper pipes, hinge.

**New function of the idea:** Expansion tank: Be the basis for the BBQ. Copper pipes: being used as a standard for the BBQ. Hinge: still as a hinge, but for holding the two halves of the BBQ together.

Draw idea:

**Can this idea be realized locally? How?** The copper pipes and hinge must be welded together. The expansion tank is already cut in half. We need to add a roster.

Where is this idea located on the value pyramid? **Remanufacture**

Are the things, needed to accomplish this, within your reach?  
At the moment we do not know someone who can weld the pieces together or what material to use for the roster.
